Hi Jason,

I apologize for not being able to have a call on Friday, Jason. I was out on flex. Tomorrow will be a very busy day for me as I have a dry run in the am for Monday early evening on Hopewell Precision site in Hopewell Junction and I will be leaving for it early afternoon, so we can have a call on Tuesday if you're available.

Thanks so much, Jason.

Lorenzo

Lorenzo:

Are you available to discuss the Navy/Northrop Grumman site today?

Thanks
Jason

Lorenzo:

I just left you a vmail. I made a few adjustments to the bullet below.

- In February 2017, NYSDEC announced that it would undertake a more comprehensive evaluation of full plume containment, including extensive modeling and mass flux (rate of contaminant mass flow per unit area) evaluation, and would also evaluate remediation alternatives as part of a Feasibility Study (FS). NYSDEC expects to complete FS and PRAP in the Summer of 2018 and subsequently hold a public meeting on the proposed remedy. The ROD is presently scheduled to be issued in the Fall of 2018.

Thanks
Jason

Thanks, Jason. If ok tho, could you just let me know if the bullet is correct on the schedule. It's just that our public affairs person asks for it by COB and I don't want to give any misinformation. Thanks much, Jason.

Hi Jason,

Following up on my voicemail just left on your phone, just want to ask if you could email me NWIRP/NG progress update table similar to I think what you had emailed me last year. As I also mentioned in my voicemail, I have to prepare a very brief bulleted NWIRP-NG update for my Regional Administrator's talk at an event next week. Could you take a look at one of my bullets, pasted below, for accuracy. I got this info from Don's update provided in last week's 2-26-18 EPA-NYSDEC Monthly Coordination Video Conference Call. Don also gave a schedule update on extraction wells that are being and will be installed which didn't come out too clear to me. If you could shed some light on it, that'd be great or better yet if you could just email me an progress update table that'd be awesome.

- In February 2017, NYSDEC announced that it would undertake a more comprehensive evaluation of full plume containment, including extensive modeling and mass flux (rate of contaminant mass flow per unit area) evaluation, and would also evaluate remediation alternatives as part of a Feasibility Study (FS). NYSDEC expects to complete a draft FS in the Spring and subsequently hold a public meeting on it. The ROD is presently scheduled to be issued by the end of this year.

Thanks so much, Jason.

Lorenzo
